

## Origins of CN 418000 to 418399

© Eric A. Neubauer, October 2, 2010

[ericrailroadcarhistory.com](http://ericrailroadcarhistory.com)

My Berwick Forge & Fabricating working production list was last printed out over 7 years ago and was definitely in need of an update. Scribbled corrections and additions filled the margins and even the backs of several pages. As part of the process, I decided to do a thorough search of the Surface Transportation Board records for any National Railway Utilization Corporation (NRUC) data I might have missed earlier. The Berwick and Evans cars were mixed together in most reports, so I compiled the data for those cars too.

NRUC cars generated a lot of reports. The main parties involved included NRUC which managed the cars, the owners, and the banks which served financial agents. Owners ranged from large corporations and insurance companies to individual people. NRUC ended up owning many of the cars themselves.

The reporting marks and numbers were changed on many of the cars during the 1980s. ICG ended up with the largest number, but CN received one of the largest single blocks between late 1988 and early 1989. They were CN 418000-418399. Apparently six of the cars were never actually numbered and another six were not renumbered as originally planned, but replaced with other cars instead. The previous reporting marks and numbers of all CN cars were located, but unfortunately the original reporting marks of 18 were not found.

Disposition data follows original order in my production lists, but arranging data according to the new series is an effective way to catch errors and make additional connections. The following is an example. Berwick cars and kits are in green, Evans cars and kits are in blue. Cars with uncertain origins are in pink. Numbers enclosed in "<>" are STB record numbers. The two dates are given after the CN numbers are the accepted/shipped dates.

| Original      | Intermediate              | Canadian National                         | Owner | Contract |
|---------------|---------------------------|---|-------|----------|
| NSL 155869 to |                           | CN 418000 in 12-87/2-88 <15517, 15517-RR> | NRUC  | 2679     |
